

#553 OSHA's National Emphasis Program for Primary Metals – Intermediate

11:15 a.m. to 12:15 p.m. – Wednesday, March 28

This session will address the hazards of the primary metals industry and OSHA's National Emphasis Program targeting program. Participants will learn what operations may present hazards at work and home; measures to control exposures; and how to determine if you've been exposed to substances such as lead, hexavalent chromium, silica and benzene, and how to identify the extent of the danger from these substances. You will be able to describe the potential hazards of substances such as lead, hexavalent chromium, silica and benzene; explain how to control exposures to these substances; and identify the extent of the danger from these substances.
