Smoke, fire and water — live demonstrations

This three-part session of live demonstrations provides a basic understanding of how a fire starts and the techniques used to control it. Participants will observe the cause of a simulated fire and learn to identify and use the appropriate type of fire extinguisher. Opportunities to discharge a fire extinguisher will also be available. Representatives of the Ohio State Fire Marshal's office and fire safety organizations will be on-hand to answer questions. Attendees will learn to identify how smoke moves through an enclosed facility; operate the appropriate fire extinguisher for different types of fires; and describe the water flow operation of various sprinkler heads. NOTE: Attendees must rotate through each of three 20-minute stations in this session to receive credit.

Presented by Tim Skinner, Business Agent, Sprinkler Fitters Local 669; Robert Barnett, Assistant Director of Facilities Management, The Ohio State University; and Roger Clark, Fire Safety Inspector, Ohio Division of State Fire Marshal
