

#265 Rolling fire door functionality and inspection – Basic
2:30 to 3:30 p.m. – Wednesday, March 30

This session presets a descriptive review of rolling fire door functionality which includes both fire door systems, the tension release technology of the past and the new "out of balance" systems used in today's easily tested and re-set systems. The session will cover identification of fire door installation errors, a review of NFPA 80, UL and FM requirements, and a review of key fire door inspection points, including recommendations for corrective action.

You will be able to explain the mechanical functionality of different types of rolling fire doors; and identify critical inspection points to ensure safe reliable activation.
