Emergency preparedness for construction: Unique characteristics, unique hazards

You are having an emergency. EMTs, police, and firefighters are arriving on-site. Your adrenaline is racing. Now is NOT the time to develop your emergency preparedness plan. Now is the time to put into action the plan you have developed, evaluated and practiced. Attend this informative program to learn about how Gilbane Building Company has evaluated the unique characteristics and hazards common to mobile work forces. Use its experience to modify or begin developing a program that works for your firm. Attendees will be able to describe the pre-planning necessary to implement an effective emergency preparedness plan; explain how to examine their current emergency preparedness plan, recognize strengths and deficiencies and revise the plan as needed; define how to recognize parallels in the hazards identified by Gilbane Building Company; and list how to adopt similar best practices.

Presented by Pat McMillen, regional safety manager, Gilbane Building Co.
