#923 Aging in the Workplace: Keeping Employees Safe and Productive – Basic

9 a.m. to 4 p.m. – Tuesday, March 27

By 2018, workers ages 55+ will make up 25 percent of the workforce. Although all employers will have age-diverse workforces, your site may be more or less affected by the increase in aging workers (And it could and should be a plus!). This one-day (6-hour) session will describe normal physical and cognitive changes that occur with age and how they can affect an employee's safety and productivity. Specifically, the following topics will be discussed: demographics and workforce projections; normal cognitive, physical and psychosocial age-related changes; task analyses and focusing on age-related issues; interventions for the workplace; and training opportunities. You will be able to describe normal cognitive, physical and psychosocial age-related changes; list how to prioritize jobs and tasks that should be targeted for interventions; discuss interventions for jobs with age-related issues; and identify areas that should be topics for training.
