#924 First Aid in the Workplace – Basic

9 a.m. to 4 p.m. – Tuesday, March 27

This session is designed for individuals who need to know how to recognize and provide basic care for injuries and sudden illnesses, including how to use an automated external defibrillator (AED) for victims of sudden cardiac arrest. You'll learn how to prioritize care for life-threatening injuries or sudden illnesses; give cardiopulmonary resuscitation, including the use of an AED; care for a victim having a breathing emergency; and provide basic treatments for other injuries. You will be able to list ways to evaluate a medical emergency until advanced medical personnel arrive; recognize the signals of a heart attack; and explain how to provide first aid to an injured individual.
