

**#335 Mercury in school gymnasium floors – Basic**  
**2:30 to 3:30 p.m. – Thursday, March 31**

This session will consist of a discussion on the emerging issue of mercury vapor being emitted from polyurethane gymnasium floors. Attendees will learn how to identify schools and buildings that may be affected by this issue, possible health effects of mercury exposure and remediation steps. You will be able to identify the types of buildings that may be affected; explain signs that indicate professional help is needed; describe the steps to take if this threat is found.

Developed by the Industrial Hygiene committee

Presented by David Gandee, president, Gandee and Associates, Akron
