

**#513 Is your load ready for the road? Part 2, hands-on live demonstration – Intermediate  
11 a.m. to Noon – Thursday, March 31**

Typical construction work requires that heavy equipment and materials be moved on and off the work site. In order to safely transport these loads which are often large, heavy and irregularly shaped, operators must be aware of and follow the federal regulations governing load and cargo securement. This session is designed to provide an introductory understanding of the loading and securement regulations for materials and equipment, which must move on public highways and thoroughfares. You will be able to describe the importance of proper placement of equipment and material for securement; and select the correct type, number, and application of cargo tie-downs.

Developed by the State, County and Municipal Employees committee

Presented by Carl Merckle, David Leach, and Richard Culbertson, equipment training officers, Ohio Department of Transportation
