

**#434 Eye on safety: Educational resources to teach eye safety habits – Basic**  
**1:15 to 2:15 p.m. – Wednesday, March 30**

This educational session will present two unique educational resources that you can use to reinforce proper eye safety protection with young adults. COSI-Columbus will demonstrate two exhibits they've developed in partnership with Prevent Blindness Ohio that focuses on protecting our eyes from the sun, the other on protecting our eyes from impact injuries. Nationwide Children's Hospital will provide session participants with access to their free high school eye safety curriculum "One Pair of Eyes" and supporting hands-on activities, and empower participants to use the resource in their classroom and training sessions. You will be able to explain situations in and outside work where protective eyewear is recommended; describe how to select and use appropriate eye protection; and identify external resources with more information about eye safety.

Developed by the Prevent Blindness committee

Presented by Christina Beargie, faculty leader for performances, COSI, Columbus
